CASE STUDY

VERSIO BV

EMAIL SECURITY IN THE CLOUD OR ON-PREMISES

INCOMING » OUTGOING » ARCHIVING

Local Cloud » SaaS Managed Email Security on your own premises » Outgoing Filter » 5-tier Control » API » Clusterable » Synchronized » Scalable

Protecting your business from a security breach isn't just about practicing safe tech, it's also about having a good security policy in place, and letting professionals deal with email based threats. That is why it is crucial that webhosting providers provide incoming and outgoing spam and virus protection to their clients. SpamExperts offers the most advanced spam filtering and classification system on the market for web hosts.

Quick Read

Versio is a Dutch webhosting company founded in October 2008. It offers various types of hosting and domain name registration services to both businesses and consumers. Due to the low prices and high service quality, Versio has built a good reputation among its customers. Versio is a direct registrar with SIDN (.nl), DNS Belgium (.be), EURid (.eu) and Nominet (.uk). Currently, the web host offers various types of hosting and domain name registration to more than 75.000 customers.

Challenges

Prior to working with SpamExperts, Versio didn't have a proper in-house outgoing filtering solution in place. However, they were using a SpamExperts competitor solution for incoming filtering. As it was getting more and more difficult for clients to send out emails the team started looking for a more robust and professional solution. Once the SpamExperts outgoing filter was recommended, they immediately understood the importance of including such a service in their product offering.

"In the past, we had a lot of problems with spammers. Now that we've been using SpamExperts to filter Outgoing emails, we have been really successful at preventing our servers from getting blacklisted," explained Reshad Bashir, Versio CEO.

Customer profile

Company	Versio BV
Location	Almere, Netherlands
Industry	Webhosting
Number of filtered domains	Unlimited domains Outgoing
Products in Use	Local Cloud, Outgoing Filter
Website	http://www.versio.uk/

Implementation

Versio has been a SpamExperts client since 2015 when they implemented the outgoing filter in the Local Cloud. The redundant Local Cloud is deployed on the customer's hardware, allowing full control of the solution, whereas SpamExperts is managing it. The team has the flexibility of using their own infrastructure and provide a proven anti-spam solution with exceptionally low latency to end-clients. Furthermore, the outgoing filter is the perfect solution to avoid IP blacklisting, improve abuse manageability, avoid severe fines and protect their brand and infrastructure.

Benefits

Versio currently uses outgoing filtering on all webhosting and reseller hosting servers. Shortly after deployment, SpamExperts had already brought a lot of improvements to the growing spam problems. The team spends less administrative time dealing with spam-related issues and the company now has a professional spam filtering product which customers can enjoy with their existing service. The extensive reporting functions in SpamExperts, allowed the team to collect all the necessary data and their engineers could focus more on their daily tasks, instead of dealing with external abuse complaints, and de-listing servers from automated blacklists.

Target Reached

"We are very satisfied with SpamExperts products. They have been successful at helping us overcome outbound spam. Just as important, we really value the support team who has been quick in response, very useful and helpful," concluded Bashir.
