CASE STUDY **PACIFICHOST**

EMAIL SECURITY IN THE CLOUD OR ON-PREMISES INCOMING » OUTGOING » ARCHIVING

SaaS Managed Email Security » Outgoing Email Filtering System » Protect IP Ranges & Prevent Blacklisting » Automatically Lock-down Hacked Accounts & Block Spam » Notify Admins of Suspicious Activity

In the recent years, the surge of spam and related threats has led to a growing demand for enterprise-class email security, as email has become business critical. However, spammers are nowadays able to hack computers -and servers, and utilize them for sending out spam, which causes the problem of these legitimate machines being blacklisted, which in turn leads to not being able to send out legitimate email anymore. Therefore, it is vital to install an outbound spam filter to save your networks' reputation!

Quick Read

PacificHost is a leading provider of website development and e-commerce solutions for small to medium-sized enterprises. PacificHost focuses specifically on providing quality, feature-rich web and reseller hosting services.

PacificHost enables businesses and individuals to harness the power of information technology and Internet and provide customers with utmost satisfaction and knowledgeable customer support.

Challenges

PacificHost was suffering of spam assaults, which were affecting their activities and was contributing to the reduction of their customer base. Spam is unsolicited email which is send in large amounts and can disturb corporate activities, i.e. threats of viruses -and phishing and time lost on sorting out emails.

According to Thomas Perry, CEO of PacificHost, "We were losing customers due to spammers on the servers. The spammers were bypassing our spam detection service and thus our IPs were being blacklisted. Since using the service we haven't had any issues with spammers. SpamExperts expertly filters spam and protects our hosting service for all
