CASE STUDY

EURONIC OY

EMAIL SECURITY IN THE CLOUD OR ON-PREMISES

INCOMING » OUTGOING » ARCHIVING

Local Cloud » SaaS Managed Email Security in the Cloud »
Incoming Filter » Outgoing Filter » Email Archiving » API » Clusterable
» Synchronized » Scalable

Email filtering has become increasingly important as cyber security scams & breaches have become more visible to the public eye. While filtering incoming mail is the most known method to stop inbound unwanted & dangerous emails, as important is protecting a company's reputation. This can be done through an outbound email filtering system that protects networks from getting backlisted. SpamExperts provides industry leading filtering accuracy, all wrapped around in an easy-to-use, easy-to-understand GUI!

Quick Read

Euronic Oy is a Finnish web hosting service provider that has been around since 2001. Their core values are reliability and great customer service and their customers vary from big to small and from private companies to the public sector. Euronic Oy's modern datacenter is located in Turku, on the coast of southern Finland.

For more information, please visit the official website at www.domainkeskus.com.

Challenges

Euronic Oy was dealing with both incoming and outgoing spam issues. Exploitations of most common CMS web applications were becoming visible. Usually, the exploits were used to upload a script to a website, which, in turn, would send spam until their monitoring systems alerted and suspended said website. Quite often, the IP addresses of the sending server were listed on DNS blacklists and their customers were reporting a growing volume of incoming spam as well.

Customer profile

Company	Euronic Oy
Location	Finland
Industry	Web Hosting
Number of filtered domains	10,000 domains Incoming 10,000 domains Outgoing
Products in Use	Incoming Filter, Outgoing Filter, Email Archiving
Website	www.domainkeskus.com

Taking this into account, as well as staying true to their core values, Euronic Oy decided to look for a better email security solution so they wouldn't have to worry about blacklisting and receiving unwanted & highly dangerous emails.

Implementation

The SpamExperts reps discussed the ins and outs. Upon finding SpamExperts and agreeing on what security suite to rely upon, Euronic Oy purchased the Incoming Filter and Outgoing Filter products. The Local Cloud deployment option was chosen because most of their customers are located in Finland and they deemed it unnecessary to route the email traffic through foreign servers.

With SpamExperts tech engineers lending a hand in the implementation process, Euronic Oy got the filtering systems up and running in a timely manner.

“Support has been great. Our support tickets have been mostly technical, for example concerning some API commands. Answers from support team have always been quick and exact,” says Tuomas Kuronen, Linux Specialist, Euronic Oy.

Benefits

By employing SpamExperts, the incoming spam to their customers' mailboxes has significantly decreased. As well, outgoing spam sent from compromised web sites now gets blocked by the Outgoing Filter software that prevents their shared IP addresses to get blacklisted.

Target Reached

“The number of our web hosting servers is increasing so we needed some centralised mail gateway to ease monitoring and filtering our inbound and outbound email traffic. SpamExperts LocalCloud has proven to be a good tool for that. Stable email service is important part of our hosting services so it is good to know that also support is quickly available if needed,” explains Tuomas.
